

Traditional Method of Folding the American Flag

1

STEP ONE

Fully flatten out the flag and fold once lengthwise.

2

STEP TWO

Fold lengthwise again making sure that the union of white stars against the blue background remains towards the outside.

Note: you may need to add a third fold lengthwise for an oversized flag.

3

STEP THREE

Once the flag has been folded the second time, take the lower striped corner of the flag and fold it to create a triangular edge of the far right side of the flag.

4

STEP FOUR

The point at the top of the triangular fold at the outer edge is then folded inward to create a two layer triangle.

5

STEP FIVE

Continue this triangular folding method until the end of the flag. The final product should be a triangle of the blue portion of the flag with white stars.
